

Press Release

Eaglehawk Limited Announces US Patent for Data Security

Boston, MA – March 3, 2008 Eaglehawk Limited, a pioneer in advanced enterprise-level data security technology, announced today that it had been granted a US Patent for its innovative approach to protecting high-value, high-security data elements - such as Personally Identifiable Information and Encryption Keys - from unauthorized access. The unique data security protocols addressed by the Patent are fully integrated into Eaglehawk's flagship technology, StrongBox™, which provides unprecedented levels of security over a full range of data types, applications, and networks.

US Patent 7,330,851, titled ***Data Security Through Disassembly of Data Elements or Connections Between Elements***, specifically covers the approach to securing a database wherein high-value data elements and/or the structural linkages of the database itself are removed and separately secured in an impenetrable repository such as StrongBox™ (SBX). In the event of unauthorized access to the database, therefore, the high-value data elements (e.g., Social Security numbers, credit card numbers, encryption keys, etc.) simply won't be there and, if the structural links have been removed, the database itself will appear corrupted and unusable.

StrongBox™ is a customer-hosted Web Service that provides a secure repository for any Enterprise seeking to manage access to and protect its data assets. SBX provides advanced security functionality that enables complex Enterprise data environments to centralize and streamline user authentication, access management, and audit processes. Regardless of the

type of data involved – documents, databases, spreadsheets, images, etc. – SBX provides a safe haven for an Enterprise's most important information assets.

About the Eaglehawk Group

Formed in 2000, Eaglehawk Limited is a Bermuda-based holding company that owns Eaglehawk's core technology assets, including Eaglehawk's secure data management technology StrongBox™ and its associated SBX applications. With offices in Australia, New Zealand, and the US, Eaglehawk Limited provides corporate oversight, technology research and development, corporate-wide administrative functions, and supports marketing/sales of Eaglehawk's technology assets to end-users, resellers, and third-party service firms.

Eaglehawk Inc. is a wholly owned US-based company responsible for the commercial marketing, sales, support, and deployment of the SBX product line and other commercial applications of StrongBox™ technology in the United States. Eaglehawk Inc. was established in 2000.

Eaglehawk Technologies Inc. is a US-owned company formed in 2002 to serve as the primary channel for marketing, sales, support, and development of Eaglehawk technology to public sector customers.
