

The Management Tools & Oversight You Need To Securely Share Files Across Any Boundaries

SBX SecureShare™ is a browser-based application that enables comprehensive management over the processes of securely sharing your sensitive files with your selected recipients. Utilising the access control and data protection capabilities of SBX Enigma™ technology, SecureShare provides the fine-grained role-separation, access management, and auditability demanded to safeguard your high-value information assets. All files remain in your servers until the recipient expressly requests download.

Exceptional Control

Granular control over all interactions with your sensitive files:

- What gets shared
- Who is authorised to download the encrypted file
- Who prepares the file for sharing
- Who is authorised to decrypt the encrypted file

 Word Document

C:\SharePoint\Form D 2009 - DRAFT.doc; Browse... Upload File

Imbedded control over all temporal aspects of sharing:

- When the encrypted file is available for download
- When the downloaded file is available for decrypting
- How long the encrypted file is available for download
- How long the downloaded file is available for decrypting
